Cool Hand Electric, Heating, & AC Repair

Paid Advertising Performance Update
August 26, 2026
Channel: Google Ads (Search)
Prepared by TopServ Digital

This update separates **Google Ads (Search)**, the three campaigns we manage – **Electrical**, **HVAC**, and **Branded** – from **Google Local Services**, a separate Google product on the same account that runs and reports independently and is not managed by TopServ. The two are never blended below.

Google Ads (Search) – By Campaign

August 10–25 (16 days live):

Campaign	Spend	Conv.	Cost/Conv.	Calls	Cost/Call	Forms	Cost/Form
Electrical	$977.32	24	$40.72	22	$44.42	2	$488.66
HVAC	$640.29	31	$20.65	30	$21.34	1	$640.29
Branded	$196.05	11	$17.82	10	$19.61	1	$196.05
Total	**$1,813.66**	**66**	**$27.48**	**62**	**$29.25**	**4**	**$453.42**

Branded is the most efficient campaign on cost per conversion, typical for a campaign built on the business's own name. Electrical and HVAC are each still capturing a modest share of available local search volume – real headroom if increasing their budgets becomes a priority. Google Ads doesn't track cost separately by conversion type – the same spend and clicks produce both calls and forms – so Cost/Call and Cost/Form above are each campaign's total spend divided by that count, not an independently priced figure. Phone calls are the large majority of leads across all three campaigns, which is typical for how people search for electrical and HVAC help; with only 1–2 form fills per campaign in this window, Cost/Form will naturally swing a lot from update to update and is best read as a volume signal rather than a stable price.

Coming Next: Dedicated Landing Page

A dedicated landing page for these campaigns is already built and ready to go. We're holding it until the bid strategy has enough conversion history behind it to make full use of the change, so it goes live as one clean, measurable improvement rather than another variable moving the numbers while the account is still calibrating.

Google Local Services (LSA) – Not Managed by TopServ

This account also carries a Google Local Services listing, a separate Google product tied to the same account but run and reported independently of Search. It is not part of what TopServ manages, so no LSA numbers are included above or blended into the Search figures – everything in the table is Search performance only. If it would be useful to see LSA results reported side by side with Search rather than kept structurally separate as it is today, let us know and we can add it as its own section in future updates.
