Weekly Campaign Update
Week of July 25 to July 31, 2026
Channels: Google Ads and Meta Ads
Prepared by TopServ Digital

This week we invested $2,015.31 across Google and Meta and recorded 8 customer leads, plus 9 job applications from the new hiring campaign. Two structural changes went in. Google now bids toward a higher standard of phone call, and the Meta lead campaign came off while new creative is built around the consolidated offer you asked for.

1. What Changed

Google Ads

- **Raised the bar on what counts as a lead.** Google was bidding toward any call that lasted 15 seconds. It now optimizes toward calls that run a full minute or more, plus form submissions. Budget follows the people who actually get into a conversation with your office rather than the ones who hang up after a few seconds.
- **Performance Max daily budget brought back to $50.** It had been running at $155 a day and the extra spend was buying reach rather than calls.
- **Held the non-branded Cooling campaign off** while we get the destination and the tracking right. Branded search stays live and is covering 93% of the people searching for you by name.
- **Requested a dedicated landing page for your search traffic.** This is the piece we think moves Google the most, and we are waiting on your approval before we build it. Once it is proven on search we will look at testing it behind the Meta ads as well.

Meta Ads

- **Paused the lead generation campaign on July 30.** Cost per lead had climbed to $174.81 for the week against $110.91 across its full run, so we took it down rather than keep paying the higher rate while the next creative batch is produced.
- **Brought the awareness campaign back on at $20 a day.** It keeps your name in front of the tri state at $0.68 per person who remembers seeing you, which is the cheapest work in the account.
- **Launched a hiring campaign on July 27** for the Journeyman and Lead Installer roles, targeted 20 miles around Newport. It has brought in 9 applications so far.
- **New creative requested and in production** around the consolidated offer you asked for. Expected to go live early next week.

2. Why It Changed

Google, week over week

Period	Spend	Clicks	Cost per click	Calls tracked	Cost per call
July 18 to 24	$1,658.86	68	$24.39	2	$829.43
July 25 to 31	$766.13	61	$12.56	2	$383.06

Same number of calls for less than half the money. Google is a small share of total spend right now by design, and we are keeping it small until the landing page work below is done.

The clearest signal sits inside that week. In the four days since the July 28 change, cost per click on Google dropped from $24.51 to $6.73 and click volume doubled, on 44% less spend. Four days is early, so we are watching it through next week before leaning on it, but the direction is the one we wanted.

Meta, where the money went this week

Campaign	Spend	Impressions	Clicks	Results	Cost per result
Lead generation (paused July 30)	$1,048.83	29,494	275	6 leads	$174.81
Hiring, Journeyman and Lead Installer (launched July 27)	$146.03	9,086	109	9 applications	$16.23
Awareness (back on July 28)	$54.32	12,998	16	ad recall	$0.68
Total	**$1,249.18**	**51,578**	**400**		

Creative performance, and why the offer consolidation matters

Across the full run of the lead campaign, the offer in the ad mattered far more than the look of the ad. Same audience, same placements, very different results.

Offer running in the ad	Spend	Leads	Cost per lead	Click rate
$1,500 back on your quote	$235.81	5	$47.16	2.67%
General service offer, version B1	$843.66	10	$84.37	0.94%
General service offer, version B2	$1,731.73	17	$101.87	0.86%
$99 tune up	$432.52	1	$432.52	0.75%
$2,500 off a new system	$103.77	0		0.99%
Campaign total, July 8 to 31	**$3,660.11**	**33**	**$110.91**	**0.89%**

The quote back offer is running on a small sample, five leads, so we are treating it as a strong signal rather than a settled number. It is the angle the new creative batch leads with.

3. Expected Impact

- **The change to how Google counts a lead.** Should bring cost per lead down by spending on people who hold a real conversation with your office instead of people who hang up in a few seconds. We will be watching cost per click, cost per call, and call volume.

- **Performance Max budget correction.** Frees roughly $105 a day that was buying reach, to be redeployed once the landing page is live. We will be watching cost per click and the share of searches you show up for.
- **Dedicated landing page.** The biggest lever available on Google right now. Google charges less per click when the page a searcher lands on matches what they typed, and today your search traffic goes to the general site. Two thirds of the searches we are missing are missed on page and ad quality, not on budget, so a matched page buys more clicks for the same money and lowers cost per lead. It also gives us a form we can measure properly. We will be watching cost per click, ad position, and cost per lead. If it performs on search, the same page becomes a test worth running behind the Meta ads.
- **Consolidated offer creative on Meta.** Should bring cost per lead back toward the $47 to $85 range the strongest offers have already hit, instead of the $174.81 the tired creative was running at. We will be watching cost per lead, click rate, and lead quality.
- **Hiring campaign.** At $16.23 an application it is the most efficient thing running. We will be watching application volume and whether the candidates are the right level.

4. Next Steps

Planned for next week

- Launch the new consolidated offer creative on Meta and restart lead generation behind it
- Build the search landing page as soon as it is approved
- Give the Google change a full clean week and read it properly
- Bring non-branded search back once the new page is live

What we are monitoring

- Cost per click and cost per call on Google, daily
- Cost per lead by offer on Meta, so the winner gets the budget
- Whether the calls coming through are turning into booked jobs
- Application quality on the hiring campaign

Waiting on you

- Approval on the dedicated landing page for search
- Sign off on the consolidated offer wording
- Confirmation of which service areas are current
- Access to booked job data from ServiceTitan. This one matters more than it sounds. Right now we can see calls and forms, but not which of them turned into paid work. Once we can see booked jobs, both platforms can optimize toward revenue instead of leads, and every number in this report gets sharper.
