TOPSERV DIGITAL · PAID SEARCH

Mission Accomplished — Google Ads Deep-Dive

HVAC · Mohave County tri-state (Lake Havasu · Bullhead City · Fort Mohave AZ · Laughlin NV · Needles CA)

Customer ID `8634274092` · MCC Topservdigital `4155514468` · CRM: ServiceTitan (call-driven)
Prepared 2026-07-02 · Read-only audit — no account changes made · Scope: PPC only (LSA excluded)

Performance snapshot — last 30 days

$5,376	94	$57	2.33%	46.5%
SPEND	CONVERSIONS	CPA (BLENDED)	CTR	SEARCH IMPR. SHARE

One campaign carries the account. Only 2 of ~80 campaigns are live; the rest is paused legacy/stale build.

LIVE CAMPAIGN	CHANNEL	SPEND	CONV	CPA
TSD_04.07_PMAX_Evergreen_HVAC (the workhorse)	Performance Max	$4,884	88	$55.50
TSD_04.08_Search_Branded_Evergreen_Mix	Search (branded)	$491	6	$82

Trajectory — CPA halved while volume tripled. April 33 conv / $104 CPA → May 37 / $117 → **June 100 / $56**. Driven by PMax maturing *plus* peak desert-summer AC season (Lake Havasu/Bullhead 110°F+). **Watch:** expect CPA to rise as heat fades — pivot messaging to heating/furnace for fall.

SEGMENT	READS
Device	~94% mobile — correct for a call business. Desktop CPA good but negligible volume.
Geo — scale	Needles CA (CPA $25), Lake Havasu (CPA $56 + volume driver)
Geo — trim	Mohave Valley (CPA $138), Big River / Parker (spend, ~0 conv)

Diagnostic — what's holding results back

#1 · Conversion tracking is polluted — the foundational issue. ~30 conversion actions enabled, ~24 marked **Primary**, and both live campaigns auto-bid — so Smart Bidding is optimizing toward a dirty, blended signal:

- **Google Business "Local actions" as Primary** — Website visits, Directions, Menu views, Other engagements. Those are profile/map taps, **not leads**.
- **Micro web-clicks as Primary** — `buy_air_filter`, `phone_link_click`, `book_now_link_click`, page-view actions.
- **Same call counted 3–6×** across Phone Call, Clicks to call, click_to_call, Calls from ads, ServiceTitan Calls.
- **Three overlapping systems un-deduped:** native GTM + GoHighLevel (`ghl_*`) + ServiceTitan.
- **Inverted hierarchy:** the two best real signals — ServiceTitan Inbound Call Website (36) & Extension (34) — are **Secondary**, while page-views are Primary. All actions `MANY_PER_CLICK`.

Consequence: the "94 conv / $57 CPA" is inflated and unreliable; bidding is chasing cheap junk.

Other structural findings

- **PMax is rank-limited, not budget-limited** — loses **36% impression share to Ad Rank** vs 18% to budget. Ad Strength is already EXCELLENT, but there's only **ONE asset group ("Services")** covering every service line, so it can't bid up high-value install queries.
- **Non-branded Search is entirely OFF** — every non-branded Search campaign is paused. PMax is the *only* non-brand engine (a black box with little search-term control or negatives).
- **Budget vs spend mismatch — verify in UI:** both live campaigns show `$70/day`, yet PMax has been spending ~$120–180/day. Confirm before any budget move.
- **Clutter:** ~70 paused legacy "Levergy" campaigns + stale April builds make the account hard to read (hygiene only, no perf impact).

Priorities — recommended action plan

P1 **Fix conversion tracking first (foundational).**

Pick ONE source of truth for calls = **ServiceTitan connected call**. Make ServiceTitan call + genuine form lead the *only* Primary goals; demote everything else (Local actions, micro-clicks, GHL/native duplicates) to Secondary; switch lead actions to `ONE_PER_CLICK`. UI change — do this **before** scaling budget so bidding runs on a clean signal.

P2 **Restructure PMax by service line.**
Split the single "Services" asset group into **AC Repair / AC Install & Replace / Heating & Furnace / Maintenance & Tune-up** — each with tailored copy, **search themes**, and **audience signals** (upload ServiceTitan customer list, in-market HVAC). Recovers rank-lost impressions cheaper than adding budget.

P3 **Launch a controlled Non-Branded Search campaign (paused for review).**
Bottom-funnel intent — `ac repair near me`, `emergency ac repair`, `ac not cooling`, `hvac repair <city>` — at ~$30–50/day on tCPA against the cleaned goal. Gives query-level control, negatives, and diversification off the single PMax.

P4 **Rebalance by city.**
Scale Needles CA ($25) and Lake Havasu; trim Mohave Valley ($138), Big River / Parker. Direct geo bid control comes with the new Search campaign.

P5 **Hygiene + seasonality.**
Archive the ~70 dead Levergy / stale builds (no perf impact). As summer fades, pivot messaging to **heating/furnace** (keywords already exist) and don't panic-cut budget when CPA rises.

> **The through-line:** results are being scaled on a dirty measurement layer. Fix conversions (P1) first; then PMax structure (P2) and controlled non-branded Search (P3) are what compound the results from here. **Budget is not the main constraint yet.**
